3M™ Littmann® Electronic Stethoscope Model 3100 exceptional sound capabilities deliver an exceptional auscultation experience. Clinical evidence shows that, it is easier to detect difficult-to-hear heart sounds like S3 gallops and aortic regurgitation murmurs, as well as abnormal lung sounds. Here's why:

- Ambient Noise Reduction Technology:

It cancels out, on average, 85% of ambient background noise that can interfere with the auscultation experience, without eliminating critical body sounds.

- Acoustic Seal Eartips and Tubing:

They create an excellent acoustic seal. It means a tighter seal from ambient noise entering through tubing and eartip connections.

- State-of-the-Art Sound Sensor

Positioned at the base of the tubing, the sensor brings the sound more naturally to your ears.

- Up to 24X Sound Amplification
